

Digital Confidence for the AI Era

An 8-Week Program to Build Real Skills and Confidence

Helping Humans Navigate Technology — No One Left Behind

Presented by TechTidy

Helping individuals, nonprofits, and communities thrive in the AI era.

Why This Program Exists

Technology and AI are advancing rapidly. For many people — especially older adults, newcomers, low-income individuals, and those in underserved communities — the pace can feel overwhelming rather than empowering.

Without digital confidence, people are more likely to:

- Miss job opportunities
- Struggle to access healthcare, government, and online services
- Fall victim to scams and phishing
- Lose independence in navigating everyday systems

Our mission: Provide a clear, supportive, confidence-first path so everyone can participate safely and successfully.

Who This Is For

- Older adults wanting to connect with family and manage daily tasks confidently
- Newcomers navigating services, banking, jobs, and communication in Canada
- Anyone who feels left behind by fast-changing technology
- Community organizations, libraries, and groups that support vulnerable populations

No tech background required — just the willingness to learn at your own pace.

Your 8-Week Journey

Week 1: Digital Confidence Baseline & Tech Foundations

Week 2: Files, Cloud Storage & Digital Organization

Week 3: Online Safety, Scams & Password Security

Week 4: Everyday Productivity Tools & Digital Communication

Week 5: AI Foundations — What It Is, How It Works, and Where It Shows Up

Week 6: Practical AI for Everyday Life

Week 7: AI for Employment, Learning & Opportunity

Week 8: Building Your Personal Digital Toolkit & Next Steps

Program Outcomes

By the end of this program, participants will be able to:

- Create, organize, and store files confidently
- Use cloud storage safely and effectively
- Identify phishing attempts and online scams
- Use strong passwords and multi-factor authentication
- Navigate essential online services independently
- Use AI tools safely for practical daily tasks
- Build a personal digital toolkit for long-term confidence

How It Works

TechTidy's Digital Confidence Program is delivered through live, guided remote training designed to meet people where they are — no tech experience required.

Over 8 weeks, participants join small-group online workshops led by TechTidy, creating a supportive space to learn, ask questions, and build confidence in real time.

Each session focuses on practical, everyday digital skills that can be applied immediately — from organizing files and staying safe online to understanding and using AI tools with confidence.

Program Format:

- 8-week live remote program
- Weekly 90-minute guided sessions
- Small group learning for personalized support
- Plain language teaching, beginner-friendly
- Practical hands-on exercises each week
- Optional printable resources and take-home guides

The goal is simple: build real-world digital confidence through human-centered learning, not overwhelm.

How Success is Measured

- Pre/post confidence surveys
- Weekly skill check-ins
- Attendance and completion rates
- Task-based demonstrations
- Participant testimonials

Get Involved

For Individuals

Download this guide and join the waitlist for early access.

For Organizations

Partner with us to pilot the program in your community.
